Executive Board
Annual session 1995
22-26 May 1995
Item 4 of the provisional agenda*

FOR ACTION

PROGRESS REPORT ON THE FOLLOW-UP TO THE WORLD SUMMIT FOR CHILDREN

SUMMARY

As the mid-point of the decade of the 1990s approaches, there are indications that a majority of countries are "keeping the promise" of the World Summit for Children. Those countries are expected to achieve a majority of the mid-decade goals. The present report summarizes the state of progress towards both the decade and mid-decade goals and reviews the status of national programmes of action and the Convention on the Rights of the Child. It also provides a brief review of major World Summit follow-up activities globally and in each region, the status of inter-agency collaboration, the role of non-governmental organizations and the private sector in keeping alive the promise of the Summit, and the situation as regards resources for this collective effort. It concludes with some recommendations on the mid-decade progress review called for by the World Summit Plan of Action.

INTRODUCTION

1. The World Summit for Children, held at United Nations Headquarters in New York on 29 and 30 September 1990, brought together 71 heads of State or Government, together with delegations from an additional 88 countries led by ministers and ambassadors, to focus on children around the world. They issued a World Declaration on the Survival, Protection and Development of Children and endorsed a detailed Plan of Action for Implementing the World Declaration on the Survival, Protection and Development of Children in the 1990s in order to reach ambitious but achievable goals for the year 2000. 1/

2. General Assembly resolution 45/217 of 21 December 1990 welcomed the adoption by the World Summit for Children of the World Declaration and the Plan of Action and urged (a) all States and other members of the international community to work for the achievement of the goals endorsed therein; (b) the donor countries especially to assist developing countries in achieving those goals; and (c) all relevant organs and agencies of the United Nations system, including their governing bodies, to provide support for the follow-up of the World Summit for Children. The present report discusses progress made in these and related areas since January 1994, when the previous progress report was prepared (E/ICEF/1994/12).

3. The goals and objectives of the World Summit for Children have been endorsed by subsequent high-level meetings such as the United Nations Conference on Environment and Development, held in Rio de Janeiro, Brazil, in June 1992; the International Conference on Nutrition, held in Rome, Italy, in December 1992; the International Conference on Population and Development (ICPD), held in Cairo, Egypt, in September 1994; and the World Summit for Social Development (WSSD), held in Copenhagen, Denmark, in March 1995.

4. In 1992, sets of mid-decade goals were adopted by the Organization of African Unity (OAU) International Conference on Assistance to African Children (ICAAC), held in Dakar, Senegal; the South Asian Association for Regional Cooperation (SAARC) Second Conference on Children, held in Colombo, Sri Lanka; and the League of Arab States meeting, held in Tunis, Tunisia. Each set of mid-decade goals subsequently received summit-level endorsement by OAU, SAARC and the Ministerial Councils of the League of Arab States. In February 1993, the UNICEF/World Health Organization (WHO) Joint Committee on Health Policy (JCHP) adopted a set of mid-decade goals, derived largely from those of OAU and SAARC, which were endorsed subsequently by the Executive Boards of WHO and UNICEF (E/ICEF/1993/14, decision 1993/16) in May 1993. At the same session, the UNICEF Executive Board also endorsed the year 1995 as a target date for every State in the world to have become party to the Convention on the Rights of the Child (E/ICEF/1993/14, decision 1993/13), as did the World Conference on Human Rights in Vienna, Austria, a month later. 2/

5. In September 1993, on the third anniversary of the World Summit for Children, a Round Table on Keeping the Promise to Children, convened by the Secretary-General, was held at United Nations Headquarters in New York. Seven heads of State or Government, along with special envoys and foreign ministers from another 17 countries, renewed their commitment to the goals for the decade and endorsed the mid-decade targets. The East Asia and Pacific Ministerial Consultation on Goals for Children and Development in the 1990s, held in Manila, Philippines, endorsed the goals in September 1993. Also calling for the achievement of the mid-decade goals were the Francophone Summit, held in Mauritius in October 1993; the Commonwealth Summit, held in Cyprus in October 1993; and the meeting of Non-Aligned Movement Foreign Ministers, held in Cairo, Egypt, in June 1994. The Second Meeting on Children and Social Policy in the Americas in Santa Fe de Bogotá, Colombia, adopted the mid-decade goals in the Nariño Accord, which was endorsed subsequently at the December 1994 Summit of the Americas.

/...

6. At its 1994 annual session, the UNICEF Executive Board invited all countries to review their national programmes of action (NPAs) to ensure that the mid-decade goals are appropriately incorporated into their national planning processes and that sufficient priority and resources are devoted to their achievement (E/ICEF/1994/13, decision 1994/A/2). The mid-decade goals are listed in paragraphs 9-22 below.

I. PROGRESS TOWARDS ACHIEVEMENT OF THE GOALS FOR CHILDREN

7. The year 1994 was one of continuing civil conflict in many countries of the world as well as one in which new man-made and natural disasters afflicted children. These emergency situations have increased deaths, worsened health, impeded normal development and reduced protection for millions of children. They also have diverted badly needed national and international resources for keeping the promise made at the World Summit for Children. Nevertheless, an intensive region-by-region, country-by-country review conducted in mid-1994 with all UNICEF field representatives indicated that more than 100 of the developing nations, with over 90 per cent of the developing world's children, are making significant practical progress towards the goals that were adopted in 1990. In particular, the assessment suggested that, despite the many set-backs in various parts of the world, there is an increasingly good prospect that a majority of "the promises" will be kept for the great majority of the world's children.

8. The momentum for these achievements was built around the child survival and development efforts of the 1980s. The acceleration of the expanded programme on immunization in the 1980s, intensified efforts to disseminate knowledge and use of oral rehydration therapy (ORT), the drive to reverse the trend away from prolonged breast-feeding and increased promotion of family planning and other basic health initiatives gave the World Summit for Children, as it were, a running start. Following is a list of the mid-decade goals and the status of progress towards achieving them.

Elevation of immunization coverage of six antigens of the expanded programme on immunization to 80 per cent or more in all countries

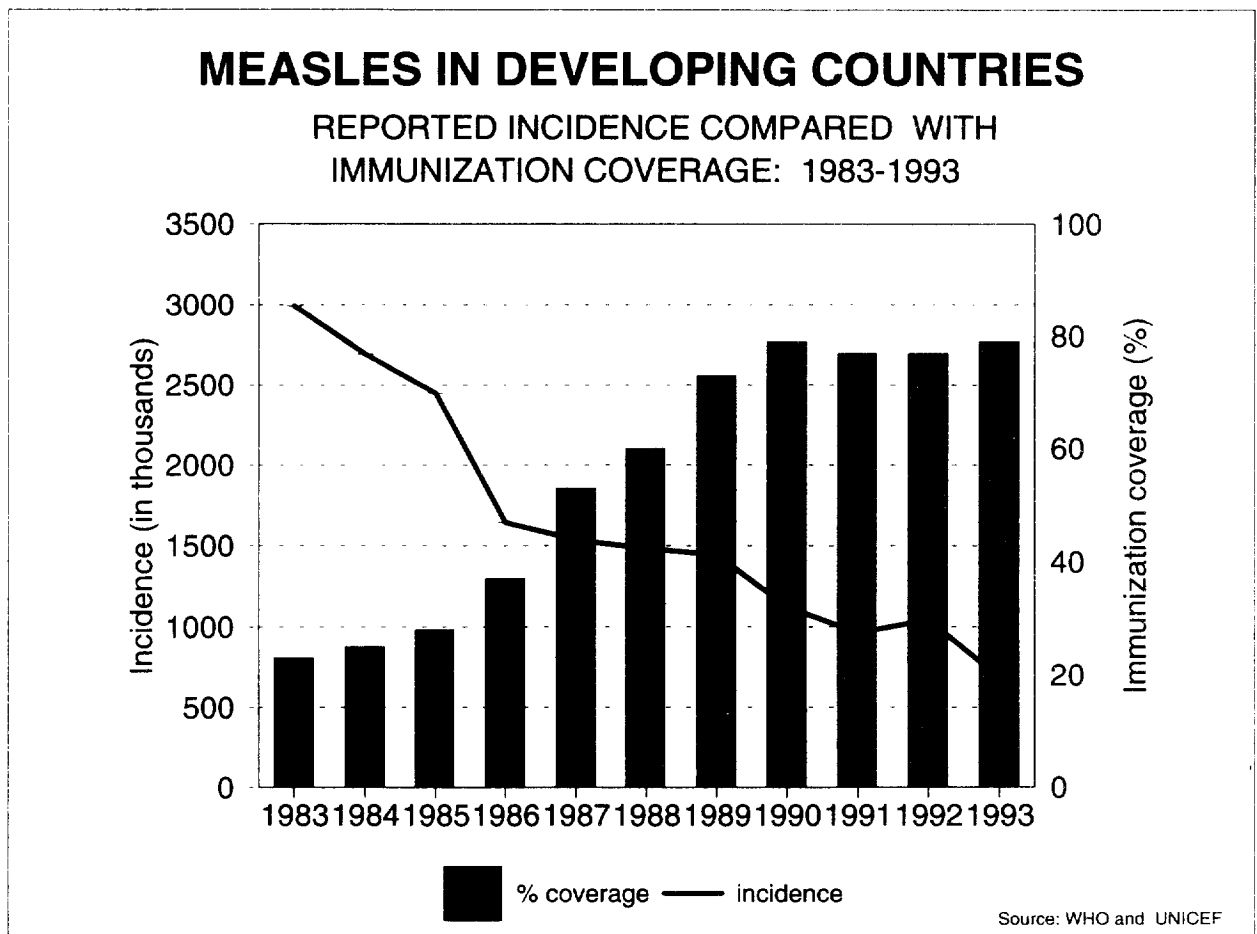

9. In 1993, some four fifths of the developing countries which achieved the universal child immunization (UCI) goal in 1990 had either maintained 80 per cent coverage of all infants or raised coverage still higher. Overall, more children are now fully immunized than ever before, preventing some 3 million child deaths every year. The slippage from UCI levels which has occurred has taken place mostly in Africa, which needs intensified action and assistance to sustain and surpass its 1990 achievement.

Reduction of deaths due to measles by 95 per cent and reduction of measles cases by 90 per cent compared to pre-immunization levels by 1995, as a major step to the global eradication of measles

10. WHO and UNICEF believe that a majority of developing countries are likely to achieve this goal by the end of 1995. The mid-1994 UNICEF assessment indicated that 54 countries are on track to achieve the goal and 38 others could do so with an acceleration of existing efforts. If the 1995 goal is achieved, measles deaths will drop below 500,000, down from over 1 million in 1990 (see figure I below).

/...

Figure 1

Elimination of poliomyelitis in selected countries and regions

11. Forty-three out of 55 developing countries that made the commitment to become poliomyelitis-free by the end of 1995 are on target to achieve that goal. The western hemisphere was certified in September 1994 as the first region to become poliomyelitis-free, and East Asia and the Pacific, North Africa and the Middle East are likely to come close to achieving the mid-decade goal. From 400,000 poliomyelitis victims in 1983, the annual toll has dropped to just over 100,000 (see figure II below).

Virtual elimination of neonatal tetanus by 1995

12. One half of the world's developing countries, some 50 of them, are likely to achieve the 1995 goal of the elimination of neonatal tetanus, and 32 other countries could achieve the goal with a major renewal of effort. In 10 years, recorded infant deaths from neonatal tetanus have been reduced from more than 1 million per year to just over 500,000.

Achievement of 80 per cent usage of oral rehydration therapy and continued feeding as part of the programme to control diarrhoeal diseases

13. Continued feeding was added to the indicator in 1993 by agreement between UNICEF and WHO. The use of ORT in developing countries averaged 44 per cent in 1993, but 44 nations are on track to achieve the 80 per cent usage target by the end of 1995. Deaths from dehydration due to diarrhoea have fallen from 4 million per year to less than 3 million per year owing largely to the use of ORT. The death toll from recent epidemics of cholera in countries such as Afghanistan, Bangladesh, Nicaragua and Peru would have been much worse were it not for the widespread use of ORT. Mexico reduced its under-five mortality rate due to diarrhoea by 56 per cent in just three years owing largely to the increased use of ORT.

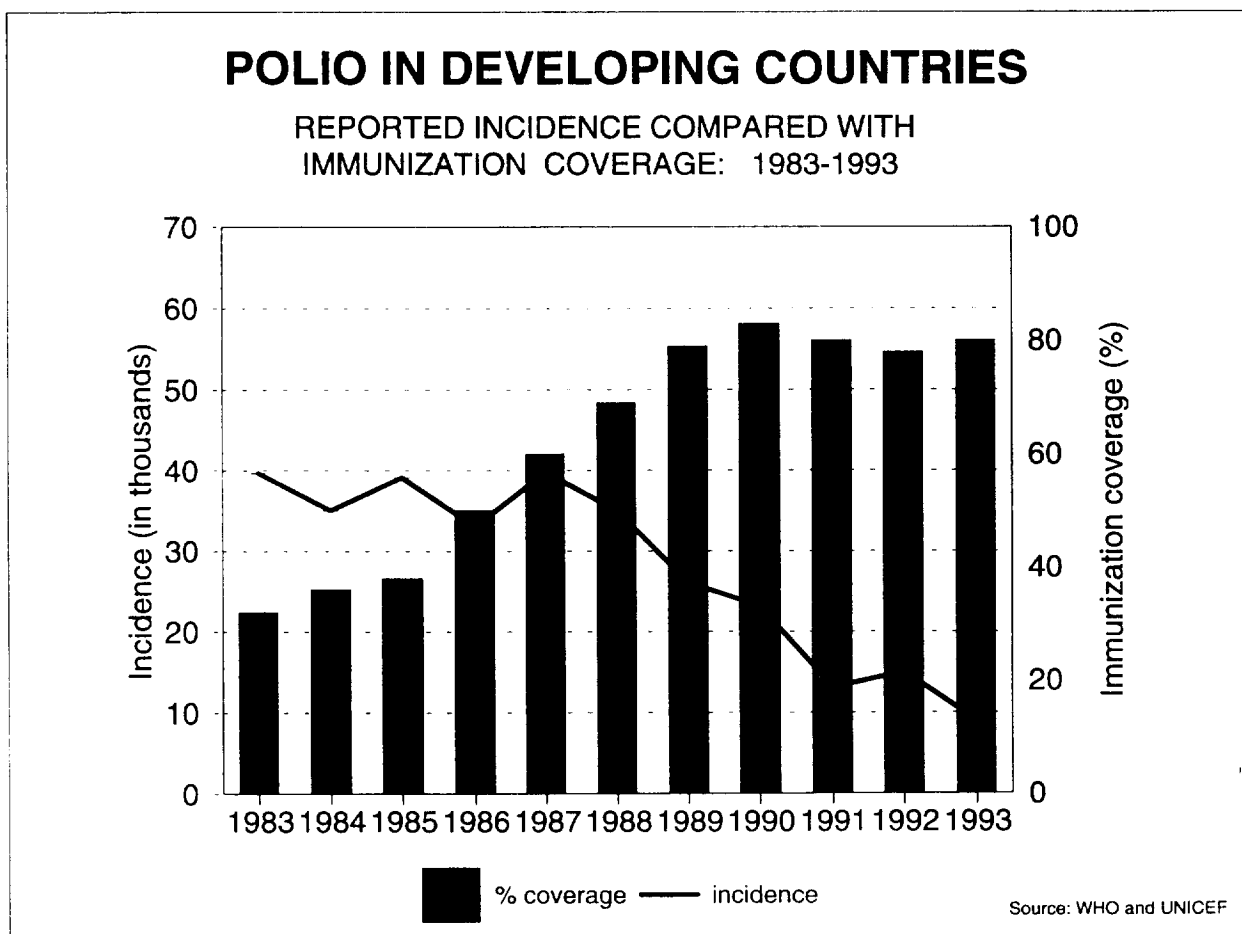

Strengthening of basic education so as to achieve reduction by one third of the gap between the current primary school enrolment/retention rate and the year 2000 goal of universal access to basic education and achievement of primary education by at least 80 per cent of school-age children, and reduction of the 1990 gender gap in primary education by one third

14. According to the mid-1994 UNICEF review, 42 of 95 countries have achieved or are on target to achieve this goal. New commitments to the 80 per cent goal were made in 1993 and 1994 by the presidents or prime ministers of nine of the most populous nations of the developing world. Figures for 1992 suggest that the proportion of the developing world's children now completing at least four years of primary school has reached 71 per cent overall.

Reduction of 1990 levels of severe and moderate malnutrition by one fifth or more

15. On the basis of information from 87 developing countries, UNICEF considers that 21 countries are on track to achieve this target. Another 40 countries could achieve the target with an acceleration of already existing national efforts. Overall, 16 developing nations have now reduced child malnutrition to the point at which fewer than 10 per cent of children are more than two standard deviations below the expected weight-for-age.

Figure II

Ending and preventing free and low-cost supplies of breast-milk substitutes in all hospitals and maternity facilities, and assisting target hospitals and maternity facilities to achieve "baby-friendly" status in accordance with Baby-Friendly Hospital Initiative global criteria

16. Of the 72 developing countries which previously allowed free or subsidized infant formulas to be distributed in hospitals and maternity clinics, all but 1 have banned the practice as of September 1994. Global consensus on the International Code of Marketing of Breast Milk Substitutes was reached in the World Health Assembly with resolution WHA47.5 of 1994. In 57 out of 102 developing countries, the action taken to date makes it likely that almost all major hospitals will have agreed to follow the "10 steps to successful breast-feeding" by the middle of the decade. A total of some 4,000 hospitals are likely to be certified as "baby-friendly".

Universal iodization of salt in countries affected by iodine deficiency disorders

17. Of the 94 countries affected by iodine deficiency disorders (IDD), the great majority are now implementing national plans for the iodization of all salt, and 58 countries are now on track to achieve the goal of iodizing 95 per cent of salt supplies before the end of 1995. Those 58 countries are home to almost 60 per cent of the developing world's children. Another 32 countries could achieve the 1995 goal with an extra effort. For the most part, large salt producers already are iodizing salt or installing machinery to do so. Efforts are now focusing on the thorny problem of helping small-scale producers to iodize their product.

Virtual elimination of vitamin A deficiency by ensuring that at least 80 per cent of all children under 24 months of age in areas affected by vitamin A deficiency receive adequate vitamin A

18. Of the 67 nations where vitamin A deficiency is a serious problem, 35 are likely to come close to eliminating the problem by the end of 1995. Approximately two thirds of all children at risk for vitamin A deficiency live in those 35 countries. This micronutrient disorder can increase child deaths from common diseases by as much as 25 per cent. In addition to deaths averted, achievement of the goal by these countries is likely to save the eyesight of 200,000 children a year.

Increasing water supply and sanitation so as to narrow the gap between 1990 levels and universal access by the year 2000 by one fourth in the case of water supply and one tenth in the case of sanitation

19. Reports from 93 nations suggest that progress commensurate with reaching the goal of clean water supplies for all is being made in approximately 40 countries. For safe sanitation, perhaps only one third of the developing countries are likely to reach the goal, according to present trends.

Interruption of dracunculiasis (guinea worm disease) transmission in all affected villages by the end of 1995

20. Surveillance data from 1993 show a 25 per cent reduction over 1992 in the number of villages where the disease is considered endemic. Overall, the figures suggest that the total number of people suffering from guinea worm disease is now well under 1 million - a reduction of some 90 per cent since the late 1980s (see table 1 below).

21. There is every chance that, by the end of 1995, the number of cases of guinea worm disease will have been reduced by 95 per cent as compared to 1990 levels, and that the disease will have been eradicated from Asia and most of

/...

East Africa, leaving a few pockets in West Africa and in the strife-torn areas of southern Sudan. It is hoped that transmission of the disease will be eliminated by 1997 and eradication achieved by the year 2000.

Table 1. Reduction in cases of guinea worm disease in five countries

Country	Number of cases	Year	Number of cases in 1993
Nigeria	653 000	1988	76 000
Ghana	180 000	1989	18 000
India	31 000	1985	800
Pakistan	1 100	1988	2
Cameroon	871	1989	72

Source: UNICEF, Progress of Nations, 1994.

Ratification of the Convention on the Rights of the Child by all countries by 1995

22. World leaders who signed the Declaration of the World Summit for Children promised to work for early ratification of the Convention on the Rights of the Child. As of 4 April 1995, 173 countries had become States parties to the Convention. Thus, 94 per cent of the world's children are now covered by ratification of the Convention on the Rights of the Child (see table 2 below). Although children's rights continue to be violated in many places and in many ways, the legal groundwork for improving their situation is now solidly in place.

Table 2. Percentage of children covered by ratification of the Convention on the Rights of the Child by region as of 4 April 1995

Region/country	Percentage
Asia	80.0
Latin America and the Caribbean	98.3
Middle East and North Africa	80.8
Sub-Saharan Africa	91.7
Central and Eastern Europe and the Commonwealth of Independent States	100.0
Industrialized countries	64.1
Global average weighted for child population per country	93.7

/...

23. Individual countries and regional groups have sometimes adopted other goals for the mid-decade as well, some of them more ambitious than those discussed in paragraphs 9-22 above.

24. Achievement of these mid-decade goals also will spur efforts to achieve other goals for the year 2000 for which no global mid-decade target was established. A significant change in maternal mortality is still to be registered, although a consensus on low-cost approaches is evolving rapidly. Progress against pneumonia, now the leading killer of children, is still too slow. However, many countries are now setting up systems and training health workers to diagnose and treat pneumonia, so that the goal of a one third reduction in cases of acute respiratory infections can be reached by the end of the decade. Altogether, the progress indicated by the mid-1994 review means that an estimated 2.5 million fewer children will die in 1996 than in 1990. It also means that tens of millions will be given a fighting chance to realize their full potential.

25. In order to ensure accurate reporting of progress towards the achievement of the goals of the World Summit for Children, UNICEF, in collaboration with WHO, the United Nations Population Fund (UNFPA), the United Nations Statistical Office, the United States Centers for Disease Control and Prevention and the London School of Hygiene and Tropical Medicine, has issued guidelines and a practical handbook for multiple indicator cluster surveys, an agile and affordable tool for use by countries in monitoring progress and guiding the management of efforts to achieve the goals. As of February 1995, some 50 countries have indicated plans to carry out such surveys in the subsequent months. China, for example, planned to complete such surveys by March 1995, early enough in the year for the State Statistical Bureau to process the data and enable authorities to take special measures in areas where progress towards achievement of certain goals may be lagging.

II. PROGRESS IN THE PREPARATION OF NATIONAL PROGRAMMES OF ACTION

A. Status of preparation

26. The Plan of Action of the World Summit for Children called upon all Governments to prepare NPAs to implement the commitments undertaken in the World Summit Declaration and the Plan of Action itself. The status of preparation of NPAs as of 15 February 1995 is presented in table 3 below.

27. The vast majority of developing countries have completed their NPAs. Except for some small-island developing States, most of the countries that have not reported any action are those affected by war, disaster or other extreme difficulties. The smallest proportion of completed or draft NPAs is among the countries of Central and Eastern Europe and the Commonwealth of Independent States, many of which were not represented separately at the World Summit for Children. Nevertheless, 25 of those 27 countries have signed the World Summit Declaration and 12 of them are in the process of preparing NPAs. Six of the 12 industrialized countries for which no action has been reported have populations of less than 400,000 and four of those less than 30,000. Thus, some 81 per cent of the world's children are now covered by NPAs that have been finalized, and 93 per cent of the world's children are now covered by NPAs that are completed or in draft.

28. Two phenomena attest to the fact that NPAs in many countries are part of a living process, rather than just documents that, once completed, are left to gather dust on ministry shelves. One of those phenomena is the frequent revisions to which NPAs are subject. Countries have revised or are revising their NPAs to bring them up to date with recent developments, to improve one or

/...

Table 3. Status of completion of national programmes of action by region as of 15 February 1995

Region/country	Finalized	In draft	Preparation under way	No action reported	Total	Percentage of child population (under 16 years) in region covered by:	
						Completed NPAs	NPAs completed or in draft
Asia	20	5	2	7	34	96	98
Latin America and the Caribbean	23	3	6	1	33	65	98
Middle East and North Africa	15	4	1	1	21	87	94
Sub-Saharan Africa	28	10	5	3	46	65	98
Central and Eastern Europe and the Commonwealth of Independent States	0	2	10	15	27	-	38
Industrialized countries	<u>14</u>	<u>2</u>	<u>2</u>	<u>12</u>	<u>30</u>	77	88
Total	<u>100</u>	<u>26</u>	<u>26</u>	<u>39</u>	<u>191</u>	81	93 (of global child population)

another portion of the programme or to incorporate mid-decade goals. Among those countries are Algeria, Bolivia, Burkina Faso, Burundi, Cameroon, the Central African Republic, Chad, Costa Rica, the Côte d'Ivoire, the Dominican Republic, El Salvador, Guinea, Guinea-Bissau, Honduras, Kenya, Malawi, Maldives, the Marshall Islands, Mauritania, Sri Lanka, Trinidad, the United Republic of Tanzania and Venezuela.

29. The second phenomenon is that of the "active draft". In a number of cases, the NPA remains in draft stage but continues to move towards finalization while actions to implement it already are being carried out. This is the case in Brazil, for example, where State plans of action have already been completed, while the NPA itself remains in draft form. Another group of countries in this category are those where the preparation process was halted due to difficult political or emergency situations, but where the process has been initiated or resumed as stability returns. Countries with "active drafts" include Cameroon, Cape Verde, Eritrea, Ethiopia, Lesotho, Guyana, Iraq, the Lao People's Democratic Republic, Lebanon, the Marshall Islands, Oman, the Solomon Islands, Togo and Vanuatu.

B. Developments at subnational levels

30. Perhaps the most remarkable development since the previous update is the widespread effort to decentralize the NPA process to provincial and municipal levels. Action programmes at provincial and/or municipal levels are known to be under development in 50 countries and planned in an additional 26. Every province in China has signed a contract with the National Coordinating Committee for Children and Women to prepare its own programme of action. Every State in

/...

India has been directed to do likewise; eight States have completed plans of action and another seven have these plans in draft form. In Latin America, 16 out of 24 countries surveyed by UNICEF are carrying out some form of decentralization of the NPA process. In the two largest countries of Latin America, Brazil and Mexico, virtually all States are involved. Provincial governors in the Philippines have signed a Declaration of Commitment for Children in the Countryside, in which they pledge to implement provincial plans of action, mobilize resources for those plans and produce annual progress reports for the President.

Table 4. Selected indicators for 50 countries with decentralized national programmes of action

Indicator	Number of countries
<u>Level of decentralization</u>	
Provincial or State level only	15
Municipal level only	7
Both levels	28
<u>Coverage</u>	
Whole country	24
Selected areas	26
<u>Institutional participation</u>	
Provincial/local government heads	17
Provincial/local government institutions	43
Other local institutions	34
National institutions	34
Non-governmental organizations	32
International agencies	16

31. In December 1994, more than 40 mayors from around the world gathered in Paris, France, for the Third International Colloquium of Mayors, Defenders of Children, to review the activities they have undertaken for the benefit of children. The declaration they adopted recognizes the Convention on the Rights of the Child as the framework for their commitment to promote and support child rights in three main areas - protection, health and education. For each of those areas, the mayors agreed to hold annual sessions in each of their cities to review the progress being made. Mayors of south-east Asian cities, including Phnom Penh and Yangon, met in Bangkok, Thailand, in October 1994; they committed themselves to pool efforts for child rights and child protection and against poverty.

32. At a nationwide meeting in August 1994, Brazilian mayors signed a manifesto in favour of children, and many of them expressed the intention to prepare municipal plans of action. In Honduras, all of the country's 291 mayors joined with 18 governors in a national Pact for Childhood to implement local systems for ensuring the rights of the child and the NPA. In Nicaragua, 33 mayors from all political parties made commitments to prepare municipal plans of action for children and formed a national commission to monitor progress

/...

towards achievement of the mid-decade goals. The first Venezuelan national meeting of Mayors Working to Protect Children took place in Caracas in April 1994, with the participation of 70 of the country's mayors.

III. PROGRESS ON RATIFICATION AND IMPLEMENTATION OF THE CONVENTION ON THE RIGHTS OF THE CHILD

33. The vast majority of countries whose leaders pledged in the Summit Declaration to work for early ratification of the Convention on the Rights of the Child have honoured that pledge. As of 4 April 1995, 173 countries had ratified the Convention and an additional 6 had signed it, Botswana, Malaysia, Qatar and Turkey being the most recent to ratify and the United States of America being the most recent signatory. This Convention now has the highest number of ratifications of any international convention in history. As noted in paragraph 22 above, 94 per cent of children in the world are now covered by ratification of the Convention (see table 2 above).

34. The Committee on the Rights of the Child has received some 50 country reports on implementation of the Convention and had reviewed more than 30 of the reports as of mid-February 1995. An analysis of the Committee's observations and reports from UNICEF field offices shows that many Governments have initiated a process of legislative reform and enactment of laws to harmonize national legislation with provisions of the Convention. The majority of States parties which reported to the Committee are establishing coordinating committees to monitor implementation of the Convention at national levels, and many at provincial, district and even village levels as well. These committees are helping to systematize the collection of data for monitoring implementation and to formulate policy for child development in national development plans. Governments also are demonstrating increased openness to dialogue with non-governmental organizations (NGOs), especially regarding the promotion of public awareness of children's rights.

35. The seventh summit of the 52-member Organization of the Islamic Conference (OIC), held in Casablanca, Morocco, in December 1994, for the first time endorsed a Declaration on Child Rights and Child Care in Islam. The Declaration called for ratification of the Convention by OIC member States that have not already done so by the end of 1995.

IV. HIGH-LEVEL COMMITMENT TO KEEPING THE PROMISE OF THE WORLD SUMMIT FOR CHILDREN

36. In September 1994, the Secretary-General submitted to the General Assembly a third report entitled "Implementation of General Assembly Resolution 45/217 on the World Summit for Children", 3/ providing information on plans prepared and actions taken by individual countries and the international community in response to the World Summit as at mid-July 1994.

37. High-level reviews to assess progress in implementation of NPAs are becoming more common, following the example of Mexico where, during his term of office, President Salinas de Gortari presided over seven public NPA evaluation meetings. The President of the Philippines conducted a mid-decade goal review in October 1994, together with his cabinet, 76 provincial governors, 62 city mayors and a national directorate representing 1,543 municipalities. The President of Turkey held a similar review the same month in the presence of the late UNICEF late Executive Director, James Grant. In May 1994, China held a national conference on NPA implementation, chaired by the State Councillor and Chairwoman of the National Working Committee for Children and Women and attended by vice-governors responsible for social programmes from every province, autonomous region and municipality. The President of Honduras personally

/...

launched the first national report on progress towards the mid-decade goals in June 1994. The President of Mongolia chaired his country's first NPA implementation review in January 1995.

38. The Prime Ministers of Bangladesh, India, Pakistan, Thailand and the United Republic of Tanzania, among others, have all pledged to review regularly progress towards the goals of their NPAs, the Prime Ministers of Bangladesh, India and Pakistan associating themselves in particular with the goals of Education for All. The newly-elected President of Panama signed a pact for children with the NGO community to join in an alliance for child rights and to work for the achievement of the mid-decade goals as a "step toward a just society". Both the President and the Prime Minister of Bangladesh have associated themselves publicly with pledges to achieve the mid-decade goals.

V. REGIONAL DEVELOPMENTS

A. Sub-Saharan Africa

39. The "Consensus of Dakar" 4/ continues to be the principal point of reference for follow-up to the World Summit for Children in Africa and has influenced developments elsewhere as well. In June 1994, the OAU Council of Ministers and Summit of Heads of State and Government, meeting in Tunis, Tunisia, reiterated its support for the Consensus.

40. The Consensus of Dakar was the outcome of ICAAC, held in Dakar, Senegal, in November 1992. The document was signed by delegations of some 44 Governments, most of them led at the ministerial level, together with donor partners from 18 industrialized countries and representatives of international financial institutions, United Nations and regional organizations, and international and African NGOs. In the Consensus, the participating African countries committed themselves to the following: to develop and implement NPAs; to restructure government budgets to support the key goals of their NPAs and to shift resources away from non-productive uses, such as military/internal security expenditures and subsidies for inefficient State organizations; and to support an increase in domestic resource mobilization through such actions as national tax reform and the encouragement of community actions and contributions. The African countries also committed themselves to reaching a set of intermediate goals by 1995.

41. Donor and international financial institutions present at ICAAC also committed themselves to provide resources to support NPAs and to "increasing and sustaining the share of official development assistance (ODA) commitment to social priority sectors by 1995 in line with increasing commitments by African countries ... bearing in mind the level of 20 per cent of ODA for these sectors recommended in the Human Development Report 1992 5/ of the United Nations Development Programme". 6/ Donor partners and international financial institutions also committed themselves to make every effort to promote debt cancellation or relief for African countries.

42. Delegates from 45 African countries, 18 of whom were at the ministerial level, met in Tunis, Tunisia, in January 1995 to review follow-up on the mid-and end-decade goals and called on all countries to report in 1996 on "progress made, using international parameters".

43. African countries continue to implement their commitments to the World Summit for Children and the Consensus of Dakar. In Benin, the NPA is being used as the framework for action in the social sector at round-table discussions on the dimensions of social development. In the Comoros, the United Nations Development Programme (UNDP) resident coordinator has organized several meetings to review NPA progress. In Mauritius, sectoral ministries are developing

/...

specific plans of action and/or projects to implement the NPA. In Ethiopia, a final draft of the NPA awaits the approval of the Council of Ministers. In Sierra Leone, the City Council of Freetown has prepared its municipal plan of action. A consultative conference in early 1994 attended by 150 delegates, including children, from all regions of South Africa agreed upon a set of recommendations for carrying the NPA process forward. Regional health management teams, regional education officers, members of parliament and regional administrators meeting in Swaziland formulated a strategy for drawing up regional plans of action. In Uganda, district plans of action for children are under development, using a participatory development approach, in 8 of the 39 districts. Zambia's NPA was approved by Cabinet in August 1994 and planning for its implementation at district level has begun. In Zimbabwe, provincial strategies are being prepared in workshops at the provincial level and mayors of the major cities are drawing up plans as well.

B. Asia

44. The touchstone for Summit follow-up in South Asia is the Colombo Resolution, 7/ endorsed in April 1993, in Dhaka, Bangladesh, at the Seventh Summit of Heads of State and Government of SAARC, strongly linking it with a collective commitment to eradicate poverty within 10 years. The resolution recommended a set of intermediate targets aimed at catalysing and accelerating progress towards the goals for the decade. The targets include access to, and enrolment in, primary education for at least 80 per cent of boys and 75 per cent of girls, and completion of primary education by at least 50 per cent of girls and boys by 1995; universal use of ORT for home-based treatment of diarrhoea and universal access to oral rehydration salts (ORS) by 1996; progressive reduction of gender disparity in all the goal-related indicators; and raising the minimum age of marriage for girls to at least 18 years.

45. In East Asia and the Pacific, the point of reference is the Manila Consensus, a product of the September 1993 Regional Ministerial Consultation in Manila, the Philippines, in which 17 countries reaffirmed their commitment to pursue vigorously the goals of their respective NPAs and to adopt policies, programmes and relevant strategies to achieve the mid-decade goals by the end of 1995. They also urged member States to use the occasion of WSSD in 1995 to report on the progress being made on achieving the mid-decade goals.

46. The vice-governors of each of China's 30 provinces met in 1994 to discuss NPA monitoring and evaluation. The NPA process in India is now being transformed into a set of State-specific programmes of action for children, and many of these, in turn, are being decentralized to the district and even the municipal level. President Soeharto of Indonesia has launched the "Clean Friday" movement in an effort to achieve the World Summit goal of universal access to safe water supplies and sanitation. Malaysia finalized its NPA in 1994 and it is being used by the country's Economic Planning Unit to screen planning and budgeting proposals. In Mongolia, 15 out of 22 aimags (provinces) and cities have formulated their own programmes of action under the guidance of committees headed by either the Governor or the Director of the Department of Social Affairs. Thailand also completed its NPA in 1994, and provinces are in the process of preparing programmes of action for health, nutrition and child protection in 15 provinces and for the elimination of IDD in 8 provinces where the rate is especially high.

C. Middle East and North Africa

47. In March 1994, Arab health ministers in Cairo, Egypt, reaffirmed their commitment to the Pan-Arab Plan for Child Survival, Protection and Development adopted by the League of Arab States at a high-level meeting in Tunis, Tunisia, in November 1992. The plan set targets for the year 1995, including the

/...

eradication of poliomyelitis, a 95 per cent reduction of deaths from measles in the region, the elimination of neonatal tetanus, an 80 per cent usage rate for ORT, universal salt iodization, halting the free distribution of breast-milk substitutes and the designation of all major hospitals as "baby-friendly". The meeting called for effective monitoring systems in every Arab State and established a permanent committee for follow-up to implementation of the plan.

48. In Egypt, six Governorates have prepared situation analyses as preliminary work towards the development of programmes of action for each of them. Similarly, in the Sudan, situation analyses have been completed in all the northern States and State programmes of action have been drafted for three States. Unique to the Sudan is the Child-Friendly Village Initiative, through which community members are enabled to assess the situation in their villages and to develop village-based plans of action. The initiative includes 100 villages in the State of Kordofan, with plans to cover 200 villages by the end of 1995. The Sudan NPA also has been used in the development of its country strategy note. Opportunities for moving towards NPA finalization have emerged in several parts of the region where progress had been inhibited previously. Thus, preparation of a programme of action for children has begun in the West Bank and Gaza; drafts have been sent to the relevant authorities for final clearance in Iraq and Lebanon; and Jordan finalized its NPA in 1994. Tunisia has appointed ombudspersons at central and district levels to monitor the rights and needs of children.

D. Latin America and the Caribbean

49. In December 1994, the heads of State of 34 countries in the western hemisphere gathered in Miami, Florida (United States). They issued a plan of action renewing their commitment to key health and education goals of the World Summit for Children and endorsed the 1994 Nariño Accord, which contains the hemisphere's mid-decade targets. The Accord had been signed in April 1994 at the Second Hemispheric Meeting on Children and Social Policy, held in Santa Fe de Bogotá, Colombia, in April 1994, where it was resolved to hold annual meetings of the organizations and authorities responsible for NPAs in the region. The Accord also was endorsed by the Fourth Ibero-American Summit, held in Cartagena, Colombia, in June 1994.

50. The Latin American and Caribbean region has taken the lead in efforts to decentralize the NPA process to provincial and municipal levels. All of the larger countries in the region, and many of the smaller ones, have developed provincial or municipal programmes of action or both. The Mayors, Defenders of Children movement has taken root in Latin America more strongly than elsewhere (see paragraph 32 above). In Mexico, a process has been established for the periodic evaluation of progress of State programmes of action for children. Evaluation meetings are conducted by the State governors and, in most cases, coincide with working tours of the President of the National Commission for Monitoring the National Programme of Action. Honduras has taken the lead in another direction by creating a network of Municipal Defenders of Children as the eyes and ears of the national Human Rights Commissioner with regard to the implementation of the Convention on the Rights of the Child. Nicaragua has established the Office of Ombudsperson for minors. In Peru, the Catholic Church's Social Pastorate for Children has appointed 35 coordinators to ensure that diocesan pastoral plans include the rights of the child and the integrated development of children under six years of age. Argentina has incorporated the Convention on the Rights of the Child into its constitution. A coordinating committee from Argentina, Chile and Uruguay has been constituted to monitor NPA activity in the "southern cone".

51. In the Caribbean, Guyana and Jamaica completed their NPAs in 1994, and Saint Lucia's was in its final stages. Three dependent territories in the Caribbean (not listed in annex II on the status of NPAs) also have completed

/...

programmes of action: the British Virgin Islands, Montserrat, and Turks and Caicos Islands.

52. The Inter-agency Coordinating Committee set up to coordinate World Summit for Children follow-up activity in the region continues to meet regularly. From the beginning, it consisted of representatives of the Pan American Health Organization (PAHO), UNICEF, UNFPA, the Inter-American Development Bank, the World Bank, the United States Agency for International Development (USAID) and the Food and Agriculture Organization of the United Nations. In November 1994, the United Nations Educational, Scientific and Cultural Organization (UNESCO), the International Labour Organisation (ILO) and the United Nations Economic Commission for Latin America and the Caribbean became members of the Committee. From an initial focus on the goals for the decade in the health sector, the group has broadened its focus to the whole spectrum of decade goals for children and the strategies for achieving those goals.

E. Central and Eastern Europe and the Commonwealth of Independent States

53. For a number of understandable reasons, this region made the slowest start in follow-up to the World Summit for Children. Activity in the region has accelerated, however, during the past year. Draft NPAs have now been completed by Romania and the Russian Federation, while NPA preparation is under way in Albania, Armenia, Belarus, Bulgaria, Croatia, the Czech Republic, Georgia, Hungary, the Slovak Republic and Ukraine.

54. In July 1994, delegations led by Deputy Prime Ministers for the four Central Asian republics of Kyrgyzstan, Tajikistan, Turkmenistan and Uzbekistan met in Beijing, China, to discuss the social aspects of transition and structural adjustment and reaffirmed their countries' support for the mid-decade and end-decade goals of the World Summit for Children.

F. Industrialized countries

55. As discussed in paragraph 31 above, the Mayors, Defenders of Children Initiative has not been limited to developing countries. Italian mayors have been involved from the start. Spanish mayors held their first meeting in Pamplona, Spain, in October 1993, to manifest their concerns for children. The Mayor of Paris, France, hosted the Third Meeting of Mayors, Defenders of Children, on 8-9 December 1994.

56. The most recent of the industrialized countries to have finalized its NPA was Australia, which launched its programme in April 1994. The NPA also was reflected in the country's 1994/1995 budget, which contains new programmes for payments to working parents for child-care costs and payments to parents who have withdrawn from the labour market to care for their children. Funding also is provided for the first national strategy to prevent child abuse and a new national initiative on childhood immunization. The budget for overseas aid includes a new initiative to eradicate poliomyelitis and neonatal tetanus in countries assisted by Australian development cooperation.

57. Much of the support from industrialized countries for actions benefiting children in developing countries takes place independent of UNICEF. As part of the mid-decade review discussed in paragraphs 80-88 below, a review in early 1996 of all channels of donor country support to implementation of the World Summit for Children Declaration and Plan of Action will be in order. In the meantime, it is worth mentioning the more than \$160 million given in 1994 through UNICEF in regular supplementary funding in support of achieving the mid-decade goals, and especially three countries which have contributed more than \$20 million: Canada, Sweden and the United States.

/...

VI. THE RESPONSE OF THE UNITED NATIONS SYSTEM

58. For the first time, the General Assembly, at its forty-ninth session, devoted a separate agenda item to the promotion and protection of children's rights and adopted resolutions addressing implementation of the Convention: the protection of children affected by armed conflict (49/209 of 23 December 1994), the plight of street children (49/212 of 23 December 1994) and the prevention and eradication of the sale of children, child prostitution and child pornography (49/210 of 23 December 1994).

59. WHO has been in the forefront of follow-up activities to the World Summit for Children as they affect the health sector. A joint letter on the mid-decade goals from the Director-General of WHO and the Executive Director of UNICEF was sent to all heads of State or Government at the beginning of 1994. The forty-sixth World Health Assembly in May 1993 reiterated earlier resolutions inviting WHO member States to give the political and economic priority necessary to implement the commitments set out in the World Summit Declaration and Plan of Action. 8/ The forty-seventh World Health Assembly in May 1994 focused on the World Summit goal of empowering all mothers to breast-feed in resolution WHA 47.5, which affirms and expands on prior World Health Assembly resolutions urging Governments to end free and low-cost supplies of breast-milk substitutes and urges member States to initiate the Baby-Friendly Hospital Initiative (BFHI). WHO and UNICEF are coordinating World Summit follow-up activities at numerous secretariat levels and also at the level of their governing bodies through the mechanism of the JCHP which, at its thirtieth session in January 1995, reviewed follow-up to the World Summit for Children and especially progress towards the 10 priority health goals to be achieved by the end of 1995.

60. The development of measures for monitoring progress towards the decade goals is an important part of the follow-up process. For this purpose, WHO and UNICEF have set up a task force which has produced an agreed set of indicators for goal achievement. More recently, the two organizations have agreed on a methodology to produce nationally representative and statistically robust estimates for mid-decade goal indicators called multiple indicator cluster surveys. In December 1994, WHO hosted a meeting of technical resource people on this methodology.

61. The United Nations Statistical Office has been collaborating closely with UNICEF, WHO and UNFPA on the development of the multiple indicator survey methodology for measuring progress towards the mid-decade goals and has provided valuable technical assistance to testing the methodology in Bangladesh.

62. The United Nations Economic Commission for Africa also has collaborated with UNICEF in the development and testing of the above-mentioned methodology in Africa.

63. UNFPA also participated in the December technical meeting on the multiple indicator cluster survey methodology. The UNFPA commitment to the goals of the World Summit for Children was reinforced again at ICPD in Cairo, Egypt, in September 1994.

64. The Administrator of UNDP wrote to all UNDP resident representatives urging them to give importance to the goals of the World Summit for Children, including the mid-decade goals, as part of their "responsibilities and efforts to promote sustainable human development", encouraging them to consider what can be done by the international community to support national action towards the achievement of the goals, monitor progress towards their achievement, use them as a focus for human development advocacy and support them as part of the preparatory action for WSSD. UNDP and UNICEF are collaborating on the evaluation of aid flows taking place within the Development Assistance Committee of the Organisation for Economic Cooperation and Development.

/...

65. UNESCO, together with UNICEF and UNFPA, was involved in the initiative to focus on the nine largest developing countries, where the majority of the world's illiterate population live. The initiative was endorsed at the highest level of Government at the Education for All Summit in New Delhi, India, in December 1993. Cooperation between the governing bodies of UNICEF and UNESCO on World Summit follow-up has been institutionalized through the mechanism of the UNESCO/UNICEF Joint Committee on Education (JCE). In April 1994, JCE reiterated the importance and real possibility of accelerating action towards the goals of Education for All by the year 2000 and endorsed the mid-decade education goals. A joint UNESCO/UNICEF project on monitoring the quality of basic education and building national capacities for learning assessment completed its first phase in five countries and has expanded to eight more. Simple, workable and sustainable methodologies are being developed in each country; staff are being trained and surveys carried out to assess learning achievement.

66. Concern for children in situations of conflict expressed in both the Declaration and the Plan of Action of the World Summit for Children has been addressed by the Office of the United Nations High Commissioner for Refugees (UNHCR) in joint UNHCR/UNICEF statements on the evacuation of refugee children, joint missions to address the rights of children who are unaccompanied or at risk of abandonment as a result of conflict, the inclusion of funds for education in joint emergency appeals and efforts to try to respond immediately to the psycho-social needs of children traumatized by conflict.

67. The long-standing efforts of ILO to protect working children and abolish child labour have received added impetus with the establishment of the Interdepartmental Project on Elimination of Child Labour (INTERDEP) and the International Programme for the Elimination of Child Labour (IPEC). INTERDEP concentrates on promoting policies on the abolition of child labour and the protection of working children through regional and national seminars, awareness-raising and research on the nature and extent of the problem, and possible approaches to alleviating it. Through IPEC, this work is translated into action projects at local and national levels. In addition to the first six IPEC projects in Brazil, India, Indonesia, Kenya, Thailand and Turkey, six new projects were initiated during the past year in Bangladesh, Cameroon, Egypt, Pakistan, the Philippines and the United Republic of Tanzania. In those activities, ILO collaborates with other international organizations, particularly UNICEF and the United Nations Committee on the Rights of the Child.

68. World Bank lending for education and health has grown substantially - more than threefold for education and twentyfold for population, health and nutrition since the early 1980s - with an increasing shift within those sectors to primary health care (PHC) and primary education. Much of this shift followed the 1990 Jomtien Conference on Education for All, the goals of which were incorporated into those of the World Summit for Children a few months later. The World Bank is involved in NPA implementation in the fields of health and nutrition in Argentina, Ecuador and Nepal; water supply and sanitation in Bhutan and Madagascar; control of IDD in Madagascar and Malawi; education in Belize and the Dominican Republic; and surveys and monitoring in Chad, the Islamic Republic of Iran, Kenya, Nicaragua and Zambia. NPAs have been discussed at consultative group meetings of donors held under World Bank auspices, notably, for Ghana and Zambia.

69. The United Nations system also is involved in follow-up to the World Summit for Children at country and regional levels, as indicated, for example, in paragraph 43 above on coordination of NPA reviews in the Comoros and paragraph 52 above on coordination of World Summit follow-up activities in the Latin American and Caribbean region. The country strategy notes, in countries that have agreed to do one, continue to provide a useful instrument for setting out a constructive frame of reference for programme coordination and implementation. UNICEF has played a supportive role in the majority of the

/...

country strategy notes undertaken so far, and, in liaison with government counterparts and United Nations partners, has incorporated the interest of children in these country strategy notes.

VII. NON-GOVERNMENTAL ORGANIZATIONS

70. NGOs have been involved in preparation and/or implementation of NPAs in some 90 countries around the world. Strong NGO support for NPAs, crucial to the implementation of the Convention on the Rights of the Child, continues unabated. Sixty-six national coalitions have been established to provide alternative reports to the Committee on the Rights of the Child. NGO inputs have been received in all cases reviewed by the Committee so far.

71. "The Contribution of Youth to Lasting Peace" was the theme of the third meeting of the chief executive officers of some 60 humanitarian NGOs, held in Geneva, Switzerland, in May 1994. The objective of this initiative is to maintain the momentum in the NGO community for implementation of the World Summit for Children Plan of Action.

72. A regional Education for All network was established in western Africa, with the support of UNICEF, UNDP, UNESCO and the World Bank. It was the third regional joint United Nations agency/NGO coalition to be established for supporting the education goals, the other two being in Central Europe and Eastern and Southern Africa. The heads of four major international NGOs, Save the Children Federation, World Vision, Plan International and Christian Children's Fund, have established a coordinating mechanism for programmes to increase girls' access to education.

73. The World Organization of the Scout Movement and UNICEF signed an agreement in May 1994 on "Scouting and ORT", aimed at achieving the mid-decade goal of 80 per cent usage of ORT. This was followed by similar partnership agreements at the national level, such as one with the National Federation of Moroccan Scouting signed in November 1994. Some 5,000 scouts, representing over 1 million of their number in the SAARC region, took an oath to disseminate information on ORT and diarrhoea-prevention at their Jamboree in September 1994.

74. The World Alliance of Breastfeeding Action (WABA), a coalition of NGOs, has continued its very active support to breast-feeding and BFHI. Its members, such as La Leche League International, the International Baby Food Action Network and Wellstart, continue to train health professionals in lactation management, to advocate the adoption of the International Code of Marketing of Breast Milk Substitutes at the national level, to organize mothers' support groups for breast-feeding and to raise public awareness on the benefits of breast-feeding. During the 1994 World Breastfeeding Week, which had the theme "Making the Code Work", WABA distributed well over 75,000 copies of its action folder in nine languages, and community groups made thousands of additional copies. La Leche League and its local affiliates mobilized 20,000 people in the western hemisphere and Japan for its annual World Walk for Breastfeeding, and mayors around the world showed their support by signing the La Leche League World Breastfeeding Proclamation.

75. In Burkina Faso, the NGO 6S (Savoir se Servir de la Sécheresse dans le Sahel et la Savanne) is accelerating implementation of the mid-decade health goals by expanding vast women's networks to a national scale. NGOs are very active in the water supply and sanitation sector in a number of countries, for example, Burkina Faso, Haiti, Kenya and Nepal. The Norwegian NGO Voice of the Children initiated an international campaign in March 1994 to increase children's awareness and participation in environmental and peace issues. Inspired by the World Summit for Children, a new American NGO, Children Now!,

/...

has been established with the particular focus of assisting Governments towards meeting the goals of their NPAs.

76. Religious groups continue to be active in World Summit follow-up. In Ethiopia, both the Orthodox Church and the Islamic Councils are involved in supporting ORT. The World Conference on Religion and Peace and three Japanese religious organizations, Rissho Kosei-Kai, Soka Gakkai and Myochi-Kai, are active in supporting achievement of the World Summit for Children goals and the Convention on the Rights of the Child.

77. The International Confederation of Free Trade Unions launched a campaign against child labour in June 1994, conducting community awareness and trade union action, promoting education, advocating for national legislation on trade and providing alternative possibilities for unemployed parents of working children. Human Rights Internet, a publisher, documentation centre and clearing centre of international human rights information and documentation, has established an electronic conference on children's rights. It will keep all users abreast of country reports to the United Nations Committee on the Rights of the Child and the Committee's observations.

VIII. THE PRIVATE SECTOR

78. Rotary International continues its outstanding support to the goal of worldwide poliomyelitis eradication. With the addition of Bulgaria, the Libyan Arab Jamahiriya and Suriname in December 1994, Rotary International's campaign against poliomyelitis will have reached 103 countries through its Polio Plus programme. Rotary volunteers in India number more than 50,000. At its convention in New Orleans, Louisiana (United States), in June 1994, Kiwanis International officially launched its international fund-raising campaign to raise \$75 million to help eliminate IDD by the year 2000. As of February 1995, it had contributed some \$300,000 to IDD programmes. In the Philippines, the Jaycees have signed an agreement with the Philippine Health Department and UNICEF to promote ORT for the treatment of diarrhoea, using its 6,000 members throughout the country to organize classes for parents, conduct baseline surveys, set up ORT depots and provide human resources for the Health Department during diarrhoea outbreaks.

79. The private sector in Malawi made a first contribution of 1 million kwacha, which was used for the purchase of 1.6 million textbooks and pencils in support of universal access to primary education. The National Association of Pharmacists and private ORS producers and distributors signed an agreement with the Bolivian Health Ministry, USAID, WHO/PAHO and UNICEF to put 1 million extra sachets of ORS on the market at an affordable cost to promote the achievement of the mid-decade goal on ORT usage.

IX. RESOURCE MOBILIZATION

80. The reallocation of government budgets to increase the proportion devoted to the goals of the country's NPA is often crucial to the achievement of those goals. In July 1994, the President of the Philippines, announcing increases in government expenditure on basic social services, established a target of 5 per cent of gross national product for human priorities. Pakistan increased its budget for education by 176 per cent in its plan for the period 1993-1998. Bhutan's NPA projects increases from 8.3 to 11.2 per cent of the budget for education and from 4.3 to 6.7 per cent for health during the period 1991-1997. Chile has earmarked \$700 million, in addition to its current annual social sector budget of \$6 billion, for financing its NPA during the period 1993-2000. Senegal plans to increase the share of its expenditure for health sectors from the current 4.8 per cent to 9 per cent by the year 2000. Egypt's NPA is

/...

assigned 7.5 per cent of the budget in the 1992-1997 development plan. Viet Nam approved major budgetary increases for health and education for fiscal year 1994/1995. Reductions in expenditure on armaments are specifically mentioned in the NPAs of Namibia and Zimbabwe.

81. Mexico's social expenditure as a percentage of gross domestic product (GDP) grew from 6.1 per cent in 1989 to 9.7 per cent in 1993. This upward trend, though preceded by a steep decline during the 1980s, has been linked explicitly with the NPA process. Mexico is perhaps the only country reporting child-related expenditure specifically as a percentage of GDP, which rose from 3.1 per cent in 1989 to 4.4 per cent in 1993. Other countries reporting budgetary restructuring and increased social sector expenditure include the Gambia, Peru, Sierra Leone, Uganda and Uruguay.

82. While developing countries are making major commitments and achieving substantial results, donor countries' support for World Summit follow-up activities has been affected adversely by several circumstances. Increased demand for international financing in Central and Eastern Europe and the Commonwealth of Independent States, emergency assistance and peace-keeping is reducing the financing available for Africa, Asia and Latin America. Public attitudes in donor countries for the most part have become less favourable towards development assistance. While donor support for emergencies has increased, ODA as a whole is declining - from \$60.8 billion in 1992 to \$54.8 billion in 1993. At 0.29 per cent of donor countries' GNP, ODA is at its lowest ratio since 1973.

83. Debt relief and debt forgiveness are two ways in which donor countries and financial institutions can contribute to the mobilization of resources for children. Despite considerable progress in recent years, the debt burden of many developing countries remains unsustainably high. Among the poorest, most indebted countries, particularly those of sub-Saharan Africa, there is a need for greater reductions of bilateral and multilateral official debt.

84. During WSSD, the international community lent its political and moral weight to the proposal that measures should be adopted "... to substantially reduce the bilateral debts of the least developed countries, in particular the countries of Africa, as soon as possible ..." ^{9/} and asked that "... special consideration [be] given to those developing countries where the multilateral debt constitutes an important part of their total debt in order to seek a durable solution to this increasing problem." ^{10/} The programme of action from the Summit further encouraged the realization of "... debt swaps for social development, with the resources released by debt cancellation or reduction to be invested in social development programmes ..." ^{11/} For UNICEF, the adoption of these measures by the global community will provide important impetus to its pioneering work in the area of debt.

85. Since 1989, UNICEF and its National Committees have carried out more than 20 debt conversion transactions in 10 countries, thereby eliminating debt with a face value of \$193 million and generating local currency equivalent to \$48 million.

86. The most important mechanism for financing the achievement of NPAs in the short run is through the application of the "20/20" concept. The initiative, originally that of UNDP and UNICEF, has now gathered the support of UNFPA, UNESCO and WHO as well. Grounded in cost estimates for the achievement of the World Summit for Children goals, the 20/20 initiative is aimed at assuring that developing countries devote at least 20 per cent of government expenditure to basic human needs - PHC, including family planning, nutrition, basic education, low-cost water supply and sanitation - and that donor countries devote at least 20 per cent of ODA to those same priority areas.

/...

87. Prime Minister Brundtland of Norway, in her Rafael M. Salas Lecture at the United Nations on 28 September 1993, called the allocation of 20 per cent of government expenditure and 20 per cent of development aid to priority human concerns "minimum requirement". 12/ This concept of 20/20 was formally endorsed in 1992 by the OAU at ICAAC, by the 1993 Asia and Pacific Ministerial Consultation on Goals for Children in the 1990s, by the Eleventh Conference of Foreign Ministers of the Non-Aligned Movement, held in Cairo, Egypt, in June 1994, and by the Organization of the Islamic Conference, held in Casablanca, Morocco, in December 1995. ICPD, which was held in Cairo in September 1994, called for the 20/20 initiative to be considered in the preparations for WSSD, as did the Inter-Parliamentary Union two weeks later in Copenhagen, Denmark. After two years of systematic mobilization and persistent technical refinement, the 20/20 initiative was adopted at WSSD as a legitimate and useful instrument for guiding, assessing and monitoring overall ODA and national budgetary allocations to basic social programmes.

88. The World Summit for Children Plan of Action called upon each country "to re-examine its current national budget, and in the case of donor countries, their development assistance budgets, to ensure that programmes aimed at the achievement of the goals for the survival, protection and development of children will have a priority when resources are allocated". 13/

X. THE FORTHCOMING MID-DECADE REVIEW

89. The General Assembly, in its 1990 resolution on the World Summit for Children, requested the Secretary-General to take appropriate action to ensure the monitoring by the relevant organs, organizations and bodies of the United Nations system of their efforts, and those of all States and other members of the international community, to achieve the goals and objectives of the Children's Summit. Also, paragraph 35 (iv) of the World Summit Plan of Action requested the Secretary-General to arrange for a mid-decade review, at all appropriate levels, of the progress being made towards implementation of the commitments of the Declaration and Plan of Action.

90. In his report to the forty-ninth session of the General Assembly on follow-up to the World Summit for Children, the Secretary-General suggested that the sixth anniversary of the World Summit for Children, 30 September 1996, would appear to be an appropriate moment to announce the status of progress for children at mid-decade (the end of 1995) and for a more complete assessment of achievements as regards the mid-decade goals. The Secretary-General explains in paragraph 65 of his report that the proposed timing is such that it should give countries and regions the opportunity to hold their own assessments of these results and the international community the opportunity to register 1995 data, and states that the review's form and choice of participants requires discussion involving the relevant United Nations bodies and partners, both public and private.

91. The same report states that industrialized countries should participate in the mid-decade review along with the rest of the international community. A particular issue in this respect is the unavailability of recent data from many industrialized countries on indicators such as, for example, immunization, breast-feeding, vitamin A deficiencies and early child development. There is also a need for a few of the indicators agreed upon by WHO, UNICEF and other agencies for measuring progress towards the goals to be refined to take into account the realities of industrialized countries.

92. According to the World Summit Plan of Action,

"The governing bodies of the relevant specialized agencies and United Nations organs are requested to include a periodic review of the implementation of the Declaration and this Plan of Action at their regular sessions and to keep the General Assembly of the United Nations, through the Economic and Social Council, fully informed of progress to date and additional action required during the decade ahead." 15/

The appropriate officials of these bodies should be contacted so as to facilitate this effort.

XI. DRAFT RECOMMENDATION

93. The Executive Director recommends that the Executive Board adopt the following draft recommendation:

The Executive Board,

Recalling its decision 1994/A/2 (E/ICEF/1994/13) concerning a mid-decade review of progress towards implementation of the commitments of the Declaration and Plan of Action of the World Summit for Children;

1. Requests the Executive Director to play an active, supportive role in helping to implement General Assembly resolution 45/217 of 21 December 1990 and to undertake consultations within the United Nations system and with members of the Executive Board as to how UNICEF can best support this process called for by the World Summit for Children and Executive Board decision 1994/A/2;

2. Proposes the sixth anniversary of the World Summit for Children, 30 September 1996, as an appropriate date for the results of such a review to be announced;

3. Urges all Governments to participate in the review by carrying out prior to September 1996 assessments of progress at mid-decade towards the goals of the World Summit for Children;

4. Further urges countries, in carrying out such assessments, to include provincial and local authorities, NGOs, the private sector and civic groups in this activity, in the spirit of paragraph 34 (i) of the Plan of Action of the World Summit for Children;

5. Calls upon international NGOs to provide input to the assessment of progress as of mid-decade and of the steps that need to be taken to assure attainment of the year 2000 goals;

6. Requests the secretariat to support countries, as requested and within the context of UNICEF country programmes, in the gathering and analysis of data on progress towards the mid-decade and decade goals and the overall assessment of the country's response to the World Summit Declaration and Plan of Action;

7. Further requests the secretariat to work closely with other United Nations entities, particularly WHO, UNESCO and the United Nations Statistical Office, in systematizing the results of national assessments of progress and other relevant data, with a view to presenting, by the middle of 1996, a coherent and comprehensive statement of the status of achievement of the mid-decade goals and of progress towards the goals for children and development by the year 2000.
